

UNIT 8.1: ARITHMETICAL OPERATIONS WITH DECIMALS AND NEGATIVES		STRAND: NUMBER		
	<b>WHAT WE ARE STUDYING</b> Using formal written methods for arithmetic (including decimals and negatives)			
	<b>LINKS TO EARLIER TOPICS</b> <ul style="list-style-type: none"> <li>- Solving addition and subtraction problems</li> <li>- Rounding numbers to the nearest power of ten</li> <li>- Dividing decimals by a power of ten</li> <li>- Dividing by a two-digit number</li> <li>- Dividing fractions by a whole number</li> <li>- Using times tables</li> <li>- The inverse relationship between multiplication and division</li> <li>- Placing negative numbers on a number line</li> <li>- Adding, subtracting, multiplying and dividing decimals</li> </ul>	<b>WHAT IT WILL HELP US LEARN</b> <ul style="list-style-type: none"> <li>- Finding the nth term of an arithmetic sequence</li> <li>- Currency exchange</li> <li>- Multiplying and dividing proper and improper fractions</li> <li>- Converting mixed numbers to improper fractions</li> <li>- Number machines</li> <li>- Rounding and estimating</li> <li>- Scale factors</li> <li>- Standard index form</li> <li>- Solving linear equations</li> </ul>		
<b>KEY SKILLS:</b>		<b>R</b>	<b>A</b>	<b>G</b>
<ul style="list-style-type: none"> <li>- Add and subtract integers without a calculator</li> <li>- Multiply and divide by a power of ten</li> <li>- Multiply integers up to 3-digit numbers</li> <li>- Divide integers up to 2-digit numbers</li> <li>- Add and subtract decimals</li> <li>- Multiply and divide decimals</li> <li>- All four operations with directed numbers</li> </ul>				
<b>WHY WE STUDY THIS</b> Decimal and negative number calculations are used in everyday life, in a variety of contexts.	<b>KEY WORDS</b> Subtract, place value, whole numbers, addition, integer, operation, thousands, hundreds, tens, multiply, divide, multiple, subtraction, addition, decimal, number line, directed number, decimal places	<b>SPARX CODES</b> <u>Fundamentals</u> Q566, Q652, Q777  <u>Key Stage 3</u> M527, M106, M288, M429 M152, M911 M803, M262		
<b>YOU WILL USE THIS IF...</b> You are working out how much change you should get at the shop; calculating interest rates on a credit card, mortgage or loan; understanding bank statements and the concept of debt and overdraft.				

UNIT 8.2: LINEAR EQUATIONS WITH UNKNOWN ON BOTH SIDES				STRAND: ALGEBRA			
	WHAT WE ARE STUDYING Solving linear equations in one variable (unknown on both sides)						
LINKS TO EARLIER TOPICS <ul style="list-style-type: none"><li>Solving linear equations with brackets</li><li>Single digit directed numbers</li><li>Expanding brackets by multiplying an expression by a value</li><li>Multiplying mixed numbers by whole numbers</li><li>Substituting into a formula</li></ul>		WHAT IT WILL HELP US LEARN <ul style="list-style-type: none"><li>Subject of formulae including brackets and indices</li><li>Solving equations with the unknown on both sides (including brackets and fractional)</li><li>Use equations to solve problems described in words</li><li>Tables of values from linear functions</li><li>The subject of linear formulae</li></ul>					
KEY SKILLS:					R	A	G
<ul style="list-style-type: none"><li>To solve equations in one variable with unknowns on both sides</li><li>To solve equations in one variable with unknowns on both sides with brackets</li><li>To solve equations with unknowns on both sides with brackets preceded by a term</li><li>To solve equations with unknowns on both sides and fractional coefficients</li><li>Use equations to solve problems described in words</li></ul>							
WHY WE STUDY THIS To be able to find unknown values that appear twice in an equation.		KEY WORDS Distributive, sign, equals, equation, brackets, substitute, operation, inverse, algebra, solve, integer, coefficient, commutative, balance, directed number, negative, multiply, multiplicative, fraction, denominator, numerator, relation(ship), evaluate, constant, symbol, interpret, notation			SPARX CODES M509, M554		
YOU WILL USE THIS IF... You want to solve more complex equations in algebra. Used to be able to compare two things using the same variable.							

UNIT 8.3: ALL SORTS OF FRACTIONS		STRAND: NUMBER		
	<b>WHAT WE ARE STUDYING</b> Simplifying fractions Comparing and ordering fractions with different denominators Adding and subtracting fractions with different denominators Converting between mixed numbers and improper fractions Adding and subtracting improper fractions and mixed numbers Recognising equivalent fractions, decimals and percentages			
<b>LINKS TO EARLIER TOPICS</b> <ul style="list-style-type: none"> <li>HCFs and LCMs</li> <li>Recognising equivalent FDP</li> <li>Comparing fractions</li> </ul>		<b>WHAT IT WILL HELP US LEARN</b> <ul style="list-style-type: none"> <li>Ordering fractions</li> <li>Probability</li> <li>Improper fractions</li> <li>Dividing and multiplying fractions</li> <li>Adding and subtracting improper fractions</li> </ul>		
<b>KEY SKILLS:</b>		<b>R</b>	<b>A</b>	<b>G</b>
<ul style="list-style-type: none"> <li>Place fractions on a number line in size order</li> <li>Place a mixture of decimals, fractions and percentages in size order</li> <li>Adding and subtracting fractions including mixed numbers</li> <li>Simplify fractions</li> <li>Compare and order fractions with different denominators</li> <li>Adding and subtracting fractions with different denominators</li> <li>Converting from a mixed number to an improper fraction</li> <li>Converting from an improper fraction to a mixed number</li> <li>Adding and subtracting improper fractions and mixed numbers</li> <li>Recognize equivalent fractions, decimals and percentages</li> </ul>				
<b>WHY WE STUDY THIS</b> To help us understand division. To work out proportion of ingredients when cooking or amount of something.	<b>KEY WORDS</b> Fraction, decimal, factor, divisible, denominator, numerator, simplify, multiple, percentage	<b>SPARX CODES</b> <u>Fundamentals:</u> Q310 Q954 Q912 Q129 Q200 Q128 Q490 Q709 Q503 Q347 Q621  <u>KS3</u> M671 M335 M835 M601 M931 M264		
<b>YOU WILL USE THIS IF...</b> You work in medicine working out doses; hairdresser or barber; mechanics; in retail.				

<b>UNIT 8.4: PARALLEL, ALTERNATE AND CORRESPONDING</b>		<b>STRAND: GEOMETRY</b>		
	<b>WHAT WE ARE STUDYING</b> Understanding alternate and corresponding angles			
<b>LINKS TO EARLIER TOPICS</b> <ul style="list-style-type: none"> <li>Reason using properties of angles</li> <li>Line segments and angles</li> </ul>		<b>WHAT IT WILL HELP US LEARN</b> <ul style="list-style-type: none"> <li>The angle sum of a triangle</li> <li>Constructing the perpendicular bisector of a line segment</li> <li>An introduction to bearings</li> </ul>		
<b>KEY SKILLS:</b>		<b>R</b>	<b>A</b>	<b>G</b>
<ul style="list-style-type: none"> <li>Understand parallel lines and recognise the angles created when a pair of parallel lines is bisected by a transversal</li> <li>Identify alternate angles and use the rule to find missing angles</li> <li>Identify corresponding angles and use the rule to find missing angles</li> <li>Identify supplementary/co-interior angles and use the rule to find missing angles</li> <li>Identify which are interior and which are exterior alternate angles</li> </ul>				
<b>WHY WE STUDY THIS</b> To be able to find missing angles in a variety of different problems.	<b>KEY WORDS</b> Acute, line, equidistant, transversal, supplementary (co-interior), adjacent, parallel, bisect/bisector, obtuse, angle, alternate, congruent, corresponding, intersect, exterior, right angle, reflex, interior	<b>SPARX CODES</b> M163, M351, M679, M606		
<b>YOU WILL USE THIS IF...</b> Especially important in any kind of design work.				

<b>UNIT 8.5: SETS AND UNIONS</b>		<b>STRAND: PROBABILITY</b>		
	<b>WHAT WE ARE STUDYING</b> Using tables, grids, Venn and Carroll diagrams for sets and unions			
<b>LINKS TO EARLIER TOPICS</b> <ul style="list-style-type: none"> <li>Venn diagrams</li> <li>Probability of events not occurring</li> </ul>		<b>WHAT IT WILL HELP US LEARN</b> <ul style="list-style-type: none"> <li>Mutually exclusive events</li> <li>Venn diagrams and probability</li> </ul>		
<b>KEY SKILLS:</b>		<b>R</b>	<b>A</b>	<b>G</b>
<ul style="list-style-type: none"> <li>Be able to put numerical and survey data accurately into a Carroll diagram</li> <li>To enumerate a Venn diagram</li> <li>To find the number of elements in the various regions on a Venn diagram</li> <li>Enumerating Venn diagrams containing two or three sets which are intersecting</li> <li>Creating and populating a Venn Diagram given a set of data</li> </ul>				
<b>WHY WE STUDY THIS</b> To highlight the similarities and differences and to compare the characteristics of different data. To organise information visually.	<b>KEY WORDS</b> Data, Venn diagram, intersection, Carroll diagram, set, union, symbol, element	<b>SPARX CODES</b> <u>KS3</u> M829, M941, M755, M206, M718, M829, M419, M834  <u>GCSE</u> U476, U296		
<b>YOU WILL USE THIS IF...</b> You are working with data.				

UNIT 8.6: PERCENTAGES		STRAND: RATIO		
	<b>WHAT WE ARE STUDYING</b> Considering fractions and percentages as operators Working with percentages and percentage changes using fractions and decimals			
<b>LINKS TO EARLIER TOPICS</b> <ul style="list-style-type: none"> <li>Percentages, fractions and decimals</li> <li>Converting simple fractions to decimals</li> <li>Solving problems with HCFs and LCMs</li> <li>Recognising equivalent FDP</li> <li>Fractions of a turn</li> <li>Using all 4 operations</li> <li>Using a calculator</li> </ul>	<b>WHAT IT WILL HELP US LEARN</b> <ul style="list-style-type: none"> <li>Growth and decay</li> <li>Compound interest</li> <li>Statistical hypothesis testing</li> <li>Savings and investments</li> <li>Percentage increase/decrease</li> <li>Taxation and inflation</li> <li>Repeated percentage change</li> </ul>			
<b>KEY SKILLS:</b>		<b>R</b>	<b>A</b>	<b>G</b>
<ul style="list-style-type: none"> <li>Convert between decimals, fractions and percentages</li> <li>Order decimals, fractions and percentages</li> <li>Calculating or estimating the percentage shown on grids, pie charts and similar diagrams</li> <li>To find one quantity as a percentage of another quantity</li> <li>To find simple percentages of a quantity without a calculator</li> <li>To calculate a percentage of a quantity using a calculator</li> <li>Convert a numerical change in quantities into a percentage change</li> <li>Using percentages greater than 100%</li> <li>Use percentages to make comparisons between events</li> </ul>				
<b>WHY WE STUDY THIS</b> Making connections between FDP.	<b>KEY WORDS</b> Per cent, percentage, fraction, division, numerator, denominator, decimal, tenths, convert, equivalent, compare, quarter, half, decimal, fifths, pie chart, equal, circle, total, notation, composite, quantity, divide, evaluate, multiplication, difference, percentage change, mixed number, data	<b>SPARX CODES</b> M437, M905, M476, M533, M528		
<b>YOU WILL USE THIS IF...</b> Weather forecasting; probability; statistics; road signs; traffic lights on food labels; banks; business.				

UNIT 8.7: SEQUENCES & RELATIONSHIPS				STRAND: ALGEBRA		
	WHAT WE ARE STUDYING Finding the $n$ th term of an arithmetic sequence Interpreting linear relationships algebraically and graphically					
LINKS TO EARLIER TOPICS <ul style="list-style-type: none"><li>Substituting into a formula</li><li>Predicting numbers in a sequence</li><li>Ordering fractions</li><li>Multiplying integers</li><li>Directed numbers</li><li>Converting from miles to kilometres</li><li>Interpretation of line graphs and conversion graphs</li><li>Conversions in length, area, mass and capacity</li><li>Bar and line graphs</li><li>Points in four quadrants</li><li>Writing expressions</li></ul>			WHAT IT WILL HELP US LEARN <ul style="list-style-type: none"><li>Geometric relationships</li><li>Calculating the area of circles</li><li>Model situations using graphs</li><li>Graphs in financial context</li><li>Currency exchange</li><li><math>N</math>th term rule for geometric sequences</li><li>RPI/CPI</li></ul>			
KEY SKILLS:				R	A	G
<ul style="list-style-type: none"><li>Recognise that linear/arithmetic sequences can be written using a general term of the form <math>an + b</math></li><li>To generate linear/arithmetic sequences from an <math>n</math>th term</li><li>Find the <math>n</math>th term of an arithmetic sequence</li><li>Find the value of terms later in the sequence</li><li>To interpret conversion graphs</li><li>To read information from a given conversion graph</li><li>Be able to plot a conversion graph</li><li>To write formulae to model mathematical relationships</li><li>To identify variables and write formulae in context</li><li>To write formulae and substitute values in order to solve problems</li><li>To recognise a sequence where the difference between terms is constant</li></ul>						
WHY WE STUDY THIS Sequences occur often in the real world. Recognising when something is a sequence is a useful skill when understanding real world situation and being able to represent it is even better. Conversion graphs are also particularly useful for currency exchange, which almost everyone will do at some point in their life.		KEY WORDS Sequence, arithmetic sequence, term, ascending, $N$ th term, common difference, $n$ th term rule, term-to-term rule, conversion graph, x-axis, y-axis, axis, formula		SPARX CODES <u>Sequences</u> M241, M866, M991, M381, M166  <u>Conversion Graphs</u> M771, M205, M483, U610  <u>Constructing Equations</u> M957, M509, M707, M554		
YOU WILL USE THIS IF... Sequences are used a lot in construction, design and manufacturing. You will also use sequences for any job that requires you to form patterns of things, even if you don't explicitly use the $n$ th term rule.						

Always Pursue Excellence    *semper ad excellentiam contende*
