

## Curriculum Sequencing - Year 10

<b>Year 10 Term 1a:</b>	
<b>Topics covered:</b>	1.1 Systems architecture 1.2 Memory and storage
<b>How it links to what has been studied before:</b>	Computer Hardware
<b>How it links to what will be studied:</b>	To understand the components that make up digital systems, and how they communicate with one another and with other systems
<b>Key words:</b>	<ul style="list-style-type: none"> <li>• Architecture CPU</li> <li>• The fetch-execute cycle</li> <li>• ALU (Arithmetic Logic Unit)</li> <li>• CU (Control Unit)</li> <li>• Cache</li> <li>• Registers</li> <li>• Von Neumann architecture:</li> <li>• MAR (Memory Address Register)</li> <li>• MDR (Memory Data Register)</li> <li>• Program Counter</li> <li>• Accumulator</li> <li>• Clock speed</li> <li>• Cache size</li> <li>• Embedded systems</li> <li>• Number of cores</li> <li>• RAM</li> <li>• ROM</li> <li>• Virtual memory</li> <li>• Secondary storage</li> <li>• Optical</li> <li>• Magnetic</li> <li>• Solid state</li> <li>• Capacity</li> <li>• Speed</li> <li>• Portability</li> <li>• Durability</li> <li>• Reliability</li> <li>• Cost</li> </ul>
<b>Assessment focus</b>	Quiz 1.0, 2.0, Formal Written Assessment 1 and 2
<b>Revision tips</b>	SmartRevise, Seneca, going over topic homework
<b>Key skills:</b>	Understanding the importance of hardware details and characteristics
<b>Why we study it:</b>	To understand the components that make up digital systems, and how they communicate with one another and with other systems
<b>Mastery in this subject</b>	Demonstrate relevant and comprehensive knowledge and understanding of fundamental concepts and principles including digital systems and societal impacts
<b>Year 10 Term 1b:</b>	
<b>Topics covered:</b>	2.1 Algorithms 2.2 Programming fundamentals

<b>How it links to what has been studied before:</b>	Computation thinking and Python basics
<b>How it links to what will be studied:</b>	To analyse problems in computational terms through practical experience of solving such problems, including designing, writing and debugging programs To think creatively, innovatively, analytically, logically and critically
<b>Key words:</b>	<ul style="list-style-type: none"> <li>• Abstraction</li> <li>• Decomposition</li> <li>• Algorithmic thinking</li> <li>• Pseudocode</li> <li>• Flowcharts</li> <li>• High-level programming language</li> <li>• Errors</li> <li>• Binary search</li> <li>• Linear search</li> <li>• Bubble sort</li> <li>• Merge sort</li> <li>• Insertion sort</li> <li>• Variables</li> <li>• Constants</li> <li>• Operators</li> <li>• Inputs</li> <li>• Outputs</li> <li>• Sequence</li> <li>• Selection</li> <li>• Iteration (count- and condition-controlled loops)</li> <li>• Arithmetic operators</li> <li>• Boolean operators AND, OR and NOT</li> <li>• Integer</li> <li>• Real</li> <li>• Boolean</li> <li>• Character</li> <li>• String</li> <li>• Casting</li> </ul>
<b>Key skills:</b>	Applying mathematical skills relevant to Computer Science, Programming skills - design, write, test and refine
<b>Assessment focus</b>	Quiz 3.0, 4.0, Formal Written Assessment 3 and 4
<b>Revision tips</b>	SmartRevise, Seneca, going over topic homework
<b>Why we study it:</b>	To analyse problems in computational terms through practical experience of solving such problems, including designing, writing and debugging programs To think creatively, innovatively, analytically, logically and critically
<b>Mastery in this subject</b>	<ul style="list-style-type: none"> <li>• Effectively apply fundamental concepts, principles and mathematical skills, using sustained analytical, logical and evaluative computational thinking, to a wide range of complex problems</li> <li>• Develop and refine a complete solution that meets the requirements of a substantial problem.</li> </ul>
